Ira A. Fulton Schools of Engineering
career exploration night
for freshmen

Share with our freshmen what you did in college to get where you are now

The Ira A. Fulton Schools of Engineering Career Center invites anyone with formal education and training in aviation, engineering, technology, computer science, construction management or any related technical discipline.

What will I do? Talk to freshmen in an informal setting. At this event, students will have an assignment to meet, greet and ask questions about various professions and their chosen major. This is an opportunity for professionals to share their college experiences, career history and advice with future innovators.

How long will I be at the event? Come when you can. Leave when you must. Spend the evening talking with students one-on-one or in small groups.

Where will I be? At each event, industry guests will be assigned to “neighborhoods” based on academic majors or experience, however students and guests are free to move around the room and mingle.

YOU are the best interactive display. Small devices, prototypes, blueprints, products or any other type of visual can be a great conversation starter and enhance students’ understanding of technology and career options, but you are the main attraction.

Tempe campus
Memorial Union, Second floor
Tuesday, October 20, 2015
4-8 p.m.
